

Envision Release 4.0.4.0- Builders

NEW Attributes lists

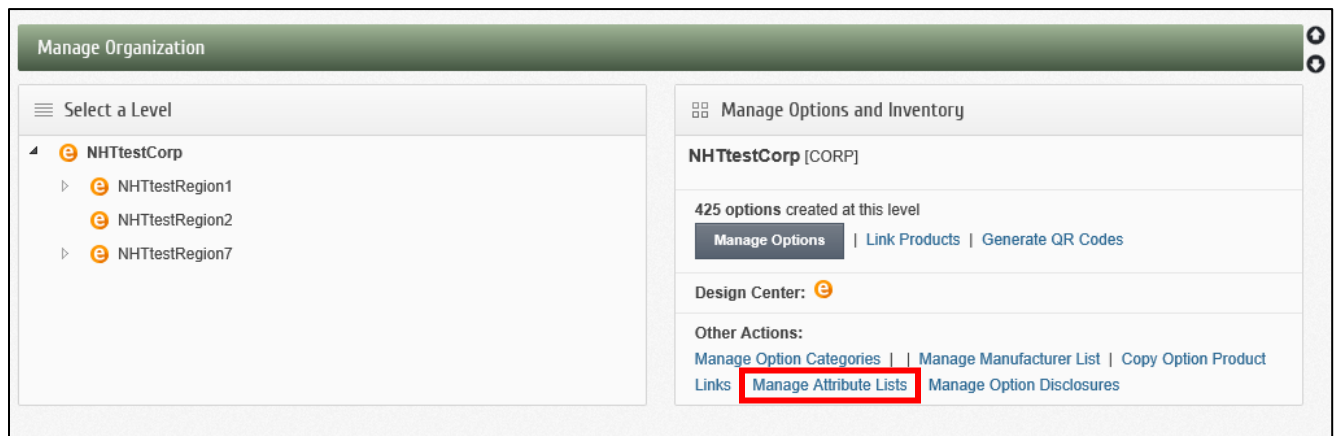

The objective of this feature is to give the builders a way to define additional attributes that can be selected as part of an option. There would be non-priced information that needs to be identified as part of that option (Example: Grout Color on a tile option)

Note

- Attribute lists can NOT be sent through the feed or assigned.
- Attributes WILL be sent back through Buyer Web services – **Please see additional XSD attachment of contact your Envision Support.**

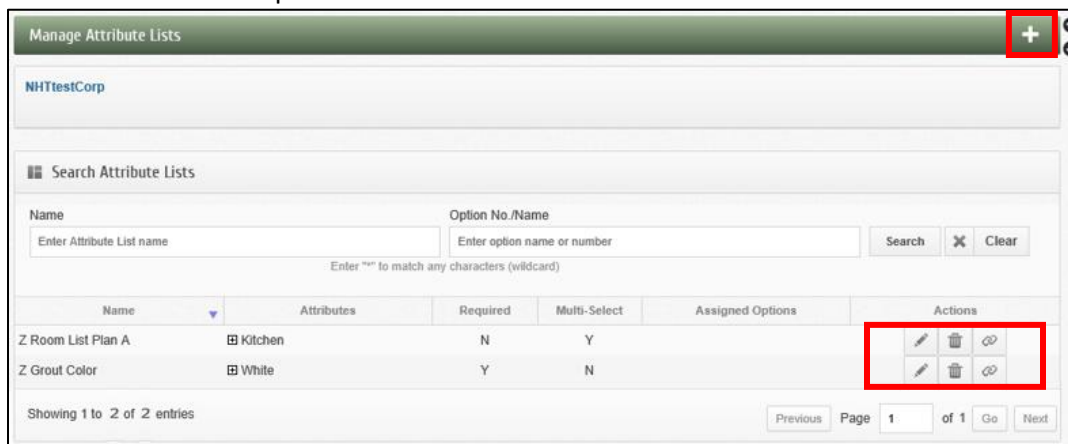

OM: Manage Attribute lists Location

The link to manage attributes lists will live at the same level that categories are defined.

OM: Manage Attribute Lists Page

- View all created attribute lists.
- Create New Attribute list.
- Edit/Delete current attribute lists.
- Link Attribute list to options.

OM: Create/ Edit Attribute List

- **Attribute List Name** – This will identify the attribute list in the DCM Option Selection.
- **Required** – If checked, it will be required to select the attribute when the Option is selected.
- **Multi-select** – This will allow for multiple attributes in the list to be selected.
- **Attribute** – Name of the attribute.
- **Attribute Image** – Allows the upload of images for each attribute.

DCM: Attributes Selectable on an Option

- If an option has an attribute linked to it, the Attribute list will display as its own section in the Option details.
 - The section collapsed by default, but can be expanded to show all options
 - There can be multiple attributes linked to an option
- If an attribute is required to select, there will be validation to select an attribute in order to confirm the selection.
