

Envision Feature in 4.17.0.0 – Builders

EDC2: Visualizer Redesign

Optimization of the Visualizer page in the EDC2 for better user interaction and experience. This new visualizer design was created to optimize the space used in the visualization while still making the interaction simple and easy to use. This UI update is intended to enhance the overall experience of the buyer using the Visualizer and increase engagement with the tool.

EDC2: Option Number Displayed on Option Tile

This feature will display the option number on the Option tile to make it more easily recognizable for the Designers. This will only display to users that are clicking into the ECD2 from the DCM.

Platform Updates

- DCM: Account for Custom Wishlists in Reporting
- EDC: Messaging added about this version going away
- Bug fixes

What's next?

OM: Ability to automatically assign options to all lower inventory

Currently Envision requires that options be explicitly assigned at the lowest level of inventory which allows those options to be priced individually per plan. The use case for this change is that there are many options that a community may offer at the same price for every plan. This feature will allow the ability to assign options at the community level which will then auto-assign to all lower level inventory at that same price.

Analytics 2.0

The following reports will be available this year at the DCM level.

1. **Consumer Metrics**

Track your buyer engagement by having access per month to lead counts, time in site, wishlist usage and more!

2. **Conversion**

Track your option/product conversion from viewing through to confirmed selections. Are options that are being viewed, being wishlisted? Are options that are being wishlisted actually being confirmed?
